

Calculus Lessons

Last updated: 08/27/2014

Author Information

Dr. Kathleen Ossman

Dr. Gregory Bucks

University of Cincinnati

Details

Description

This module contains lecture slides and assignments to teach a range of calculus concepts. These materials are a subset of course materials from *Engineering Models* that is taught to hundreds of high school students in conjunction with the University of Cincinnati as a dual enrollment course.

Contents

Lessons

- [Integral Applications](#)
 - Lectures:
 - Integral Applications: Arc Length
 - Integral Applications: Center of Mass
 - Integration Applications: Area Between Curves
 - Problems:
 - Arc Length and Center of Mass
 - Area Between Curves
- [Max Min Problems](#)
 - Lecture: Solving Minimum/Maximum Problems Using Symbolic Math Toolbox
 - Problems: Min Max Using MATLAB and Symbolic Math Toolbox
- [Newton Raphson Algorithm](#)
 - Lecture: Introduction to Newton Raphson Algorithm

- Problems:
 - Newton Raphson for Estimating the Cube Root of a Number
 - Newton Raphson Algorithm for Square Root
 - [Numerical Differentiation](#)
 - Lecture: Numerical Differentiation
 - Problems: Numerical Differentiation
 - [Numerical Integration](#)
 - Lecture: Numerical Integration
 - Problems: A Tale of Two (Velo) Cities: Estimating the Distance Between Two Objects
 - [Taylor Series](#)
 - Problems:
 - Taylor Series: $\cos(x)$
 - Taylor Series: Natural Log
 - Taylor Series: $\sin(x)$
 - [Introduction to Symbolic Math Toolbox](#) (Lecture)
-
